

The People's Cybersecurity Survey

Conducting the survey:

With the help of numerous university students and professional volunteers, **5000 employees** from different organizations were contacted for this survey from March **11th 2020 to April 17th 2020**.

The organizations involved:

This was a national survey with a mix of industries and market sizes.

The employees surveyed:

The employees that were surveyed were non-management staff.

The goal of the survey:

To discover the working force's cybersecurity knowledge by conducting an informal and anonymous survey that focuses entirely on non-management staff, not C-level executives or leaders within organizations that may have biased opinions on their company's true cyber hygiene.

What was discovered:
